

Java Full Stack Developer Syllabus

◆ 1. Core Java (Foundation – VERY important)

This is your base. If this is shaky, everything collapses.

Basics

- Variables, Data Types, Operators
- Control Statements (if, loops)
- Arrays & Strings

OOP Concepts (MOST ASKED 🔥)

- Class & Object
- Inheritance
- Polymorphism (Compile-time & Runtime)
- Abstraction
- Encapsulation

Advanced Core Java

- Exception Handling
- Collections Framework (List, Set, Map)
- Multithreading
- File Handling
- Java 8 Features:
 - Lambda Expressions
 - Streams API

Interview Tip: 70% questions come from OOP + Collections.

◆ 2. JDBC (Database Connectivity)

How Java talks to databases.

- JDBC Architecture
- Connection, Statement, ResultSet
- CRUD Operations
- PreparedStatement (important)

◆ 3. SQL (Database)

You NEED this. No backend without DB.

- Basic Queries (SELECT, INSERT, UPDATE, DELETE)
- Joins (INNER, LEFT, RIGHT)
- Group By, Having
- Indexing Basics
- Transactions

👉 Practice on MySQL/PostgreSQL

◆ 4. Servlet & JSP (Old but asked in interviews)

Still important for understanding backend basics.

- Servlet Lifecycle
- HTTP Methods (GET, POST)
- Session Management
- JSP Basics
- MVC Architecture

◆ 5. Spring Framework (CORE of backend 🚀)

Spring Core

- Dependency Injection (DI)
- Inversion of Control (IoC)

Spring Boot (MOST IMPORTANT)

- Auto Configuration
- REST API Development
- Annotations (@RestController, @Service, etc.)
- Application Properties

Spring Data JPA

- ORM Concepts
- CRUD Repository
- Hibernate Basics

Spring Security

- Authentication & Authorization
- JWT (important for modern apps)

 **Interview Gold:** Spring Boot + REST APIs

◆ **6. REST APIs**

How frontend talks to backend.

- REST Principles
 - HTTP Methods (GET, POST, PUT, DELETE)
 - Status Codes
 - JSON handling
-

◆ **7. Frontend Development**

HTML

- Structure, Forms

CSS

- Flexbox, Grid
- Responsive Design

JavaScript

- Variables, Functions
 - DOM Manipulation
 - Events
 - ES6 Features
-

◆ **8. Frontend Framework (Choose one)**

Most companies expect this:

- **React.js** (MOST DEMANDED 🔥)
OR
- Angular

👉 Focus on React if confused.

◆ **9. Version Control**

- Git basics
- Branching
- Merging

Use Git and GitHub

◆ **10. Build Tools**

- Maven

- Gradle
-

◆ 11. Web Server

- Apache Tomcat

Use Apache Tomcat

◆ 12. APIs & Testing

- Postman

Use Postman

- Unit Testing (JUnit basics)
-

◆ 13. Optional (BUT boosts salary 💰)

- Microservices Architecture
 - Docker
 - Kubernetes
 - CI/CD Basics
 - Cloud (AWS basics)
-

🔥 How Companies Actually Evaluate You

Let me be real with you:

👉 For placements like Wipro / product companies:

- Core Java (OOP + Collections) ✓
- SQL ✓
- Spring Boot + REST ✓
- Basic frontend (React/JS) ✓

That's enough to get shortlisted.

Smart Study Order (Don't mess this up)

Follow THIS:

1. Core Java
 2. SQL
 3. JDBC
 4. Spring Boot
 5. REST APIs
 6. Frontend (JS + React)
 7. Projects
-

Mini Project Ideas (YOU NEED THIS)

- Student Management System
- E-commerce Backend
- Todo App (Full Stack)
- Blog API
